

New construction housing estate Watt, Regensdorf

2010

The development in the Minergie-P Eco standard is designed as a zero-energy housing estate and consists of 2 multi-family houses and 7 terraced single-family houses. The entire settlement is built from the first floor in timber construction.

The project

The settlement House A / apartment house, duplex apartments, 4 floors House B / multi-family house, maisonette apartments, 4 floors House C+ D / terraced houses, 2 floors Total: 12 apartments and 7 terraced houses

The construction method

Interior and exterior walls in large-format, prefabricated wooden elements. The supporting structure is realized in timber frame construction. The building envelopes have an insulation thickness of 35 cm ($U\text{-value} = 0.1 \text{ W/m}^2\text{K}$). The ceilings are constructed of a special wood-concrete ceiling system with wood triple-layer panels visible below. The facade consists of horizontal larch wood lathing.
